Turning TV on/off

Step 1

Using the TV remote - TV On/Off:

Use the universal set of buttons in the top right hand box. The red power symbol in this box (ie top right hand red on/off button) turns the TV on/off.

Step 2: if watching DSTV (ie TV channels)

To watch DSTV, use the DSTV remote – oblong remote, looks like a Sky remote with DSTV engraved at the bottom. Standard on/off button at the top (grey)

Key actions on the DSTV remote

Button with a book symbol: TV guide. Use the up ▲ and down ▼ symbols to move between channels.

Button with a red circle: records programmes

Button with dots and lines: lists recorded programmes

Button with blue triangle: DSTV box office - free movies

Button with green triangle: DSTV box office - movies that are charged to our account (so we would request you avoid this please).

Step 3 – TV volume

The soundbar remote – this gives you volume for the TV: small JBL remote as over.   Press and hold the usual on/off power symbol, top left hand corner. You will know when this is on as there is a pale blue light under the soundbar at the bottom of the TV.

Step 4 - Source selection (ie TV or DVD functions)

Select source: use the source button on the oblong TV remote to activate the source – HDM1 for TV and HDM2 for DVD. (ie button next to the top right hand on/off button within the white square on the Samsung remote). Usually is set to HDM1.

Smart TV – access to Netflix etc

The oblong Samsung control is the smart TV control. You can use this instead of the Samsung remote for all TV functions ie TV channels in conjunction with DSTV remote and Netflix etc., but you only access Netflix etc using this remote.

The on/off button is the red power symbol at the top of this remote. (If using this remote, you can ignore the Samsung remote).

Use the coloured pentagon symbol in the centre of the oblong Samsung TV remote – this activates the infra-red pointer which you can use to select Netflix etc. OR use the touch pad above the coloured pentagon to move the pointer left right to select TV, Netflix etc.
